Dr. Jaffar Ahmed
Secretary, Pakistan
Partnership, Stop Tuberculosis

Stop TB Partnership Pakistan is serving as bridge among the patients and the available resources for the management of TB. So, we request Industrialist/businessmen/NGOs, and members of the medical community. We continue to produce quality medicines at affordable prices to ensure an adequate and complete course of treatment facilities available across the country. It is necessary to remove barriers or hindrances to TB treatment.

Dr. Siddharth Agarwal
Vice Chairman, Help Alliance
Partnership, Stop Tuberculosis

The objective of observing the day is to create awareness that Tuberculosis is a treatable and preventable disease. The anti TB drugs are available since last one century but still a minor of 1.5 million people died from TB in 2020. About one-quarter (25%) of the estimated 10 million TB cases go untreated each year. This gives information about prevalence of multidrug resistant TB infections. In order of availability of effective treatment facilities, 1,3 million persons failed to register for the treatment. Unfortunately, the situation in Pakistan is not much different from other high TB burden countries. Although we have diagnostic and treatment facilities available across country, out of estimated 250,000 patients having TB in 2020, 246,689 failed to register for the treatment. The situation indicates that 21,000 out of 22,000 known cases were not brought for treatment. People with active TB can infect 5-15 other people through close contact over the course of a year if left untreated. According to the theme of World TB Day 2022, we need to instill more on the awareness of TB diagnosis and treatment to eradicate this lethal disease from all over the world.

Dr. Muhammad Quayyum
Judge, Pakistan

1. Not recognizing the TB patient:
   - It is against the Global TB Report and should not be considered as TB diagnostic test.
   - TB patients should be treated.

Invest to end TB and save lives

Dr. Muhammad Quayyum
Judge, Pakistan

Not getting treatment for tuberculosis:
All presumptive treatment should be utilized for tuberculosis.

Chapter 3: How to suffer from the TB:

- Sputum microscopy
- X-ray chest
- Chest x-ray
- Culture and sensitivity test for TB

Chapter 4: How to control the disease:

- Anti-TB drugs
- Sputum microscopy
- X-ray chest
- Culture and sensitivity test for TB

Chapter 5: How to prevent the disease:

- In the USA and Europe, out of 100 people, 99 will survive.
- In Pakistan, out of 100 people, 94 will survive.

Chapter 6: How to stop the disease:

- Education:
  - In the USA and Europe, 99 people will survive.
  - In Pakistan, 94 people will survive.

Chapter 7: How to control the disease:

- Anti-TB drugs
- Sputum microscopy
- X-ray chest
- Culture and sensitivity test for TB

Chapter 8: How to prevent the disease:

- In the USA and Europe, 99 people will survive.
- In Pakistan, 94 people will survive.

Chapter 9: How to stop the disease:

- Education:
  - In the USA and Europe, 99 people will survive.
  - In Pakistan, 94 people will survive.

Chapter 10: How to control the disease:

- Anti-TB drugs
- Sputum microscopy
- X-ray chest
- Culture and sensitivity test for TB

Chapter 11: How to prevent the disease:

- In the USA and Europe, 99 people will survive.
- In Pakistan, 94 people will survive.

Chapter 12: How to stop the disease:

- Education:
  - In the USA and Europe, 99 people will survive.
  - In Pakistan, 94 people will survive.

Chapter 13: How to control the disease:

- Anti-TB drugs
- Sputum microscopy
- X-ray chest
- Culture and sensitivity test for TB

Chapter 14: How to prevent the disease:

- In the USA and Europe, 99 people will survive.
- In Pakistan, 94 people will survive.

Chapter 15: How to stop the disease:

- Education:
  - In the USA and Europe, 99 people will survive.
  - In Pakistan, 94 people will survive.

Chapter 16: How to control the disease:

- Anti-TB drugs
- Sputum microscopy
- X-ray chest
- Culture and sensitivity test for TB

Chapter 17: How to prevent the disease:

- In the USA and Europe, 99 people will survive.
- In Pakistan, 94 people will survive.

Dr. Robert Koch’s model in 1882, thinking of the bacillus that causes tuberculosis (TB). TB is one of the most common bacterial infections that cause global morbidity and mortality. TB affects the lungs but can cause infections in any part of the body. The bacillus is transmitted from one person to another through the air. 

The Ojha Institute of Chest Diseases (OICD) is providing quality professional services to the lower socio-economic status of patients. The laboratory of OICD is the free treatment facility may get from us.

The majority of our society belongs to the lower socio-economic class. Patients’ knowledge about their disease and its treatment is the requirement to prevent the transmission of TB. Wearing a face mask and not touching your eyes, nose, and mouth with your hands is necessary in TB.

We have gone through TB treatment. This message to end TB and save lives. TB needs special medications which are more expensive than ordinary drugs. The people’s knowledge about their disease and its treatment is the requirement to prevent the transmission of TB. Wearing a face mask and not touching your eyes, nose, and mouth with your hands is necessary in TB.

In Pakistan, there are ongoing research in different aspects of TB like drug-resistant TB and multidrug-resistant TB. There has been research on the diagnosis of TB, drug-resistant TB, and tuberculosis in Pakistan.
